# List of certified reference materials for processing contaminants in food

The list was compiled to the best of our knowledge and is not intended to be exhaustive. It contains examples of matrix certified reference materials (CRMs) that are relevant for work related analysis of process contaminants. In addition to matrix CRMs, there are also less well-characterized materials such as reference and QC materials or materials that were used for proficiency tests. Such materials are not listed below. It is up to the laboratories to select suitable materials according to their requirements.
